

Battelle

The Business of Innovation

Battelle is a global science and technology enterprise that develops and commercializes technology and manages laboratories for customers. Headquartered in Columbus, Ohio, we have been in the business of innovation for more than 76 years and have a vast science and technology reach. Battelle, with the national labs it manages or co-manages, oversees 20,000 staff members and conducts \$3.4 billion in annual research and development at more than 100 locations.

Battelle provides solutions and develops innovative products for commercial customers by leveraging technology into competitive advantage. We also serve more than 1,150 government and industry clients, providing cost-effective science and technology in the areas of homeland defense, national security, health and life sciences, energy, transportation, and environment.

Our organization is involved with the full cycle of science and technology—from translating scientific discovery into technology applications to refueling the next cycle of science and technology, education, and community service.

In 1990, Battelle created the Technology Partnership Practice (TPP) to better serve state and local organizations, universities, nonprofit technology organizations, and others. We have worked in nearly every state for many universities, cities, and regional and local technology organizations.

Examples of our areas of expertise include:

- Developing strategic, business, and operating plans for states, corporations, and industry organizations;
- Evaluating the existing economic development practices and policies of regions and organizations, in comparison with current best practices;
- Creating strategic planning and visioning projects for public and private agencies, for-profit firms, and universities; and
- Designing programs and centers that require collaboration across higher education, business, and government sectors.

We have worked extensively with industry, government, and academic clients and we understand each culture. This allows us to provide a common ground for building agreement, setting visions, and assisting in their implementation.
